

Solutions House

Specialists in roaming user IT solutions

Motion Commotion

Reliable roaming has been a dream until now:

Solutions House are experts in roaming user IT solutions, which are needed whenever your technical kit or your users vary location in-between or during system usage. Roaming users bring with them all sorts of unique issues for IT Managers and their organisations. Variations in levels of service, particularly speed and reliability of access, means at best work can be interrupted and at worst IT can be used as an excuse not to do the work at all. Most roaming user systems are put in place on a business case of improved flexibility and performance, so stability is crucial. As is the ease and speed of administration for the IT team. This is why we are not tied to any par-

ticular suppliers, and focus entirely on the appropriateness of the solution.

Our core services are:

Blanket Wireless

Flexible Cabling

Multi User AV Installations

Roaming Data Access

Roaming users are a general trend in IT, but certain sectors face immediate problems based on how they must deliver their service. The primary sectors we can make a large impact are:

- Education
- Retail
- Hospitality
- Flexible & Managed Offices
- Warehousing
- Transport
- Healthcare
- Government
- Exhibitions & Events
- Public Access

Solutions House

Specialists in roaming user IT solutions

Blanket Wireless

Utilising Extricom's practical and scalable blanket wireless system, we can perform site surveys free of charge, install one solution over whole sites and provide the latest wireless N access speeds.

Flexible Cabling

With highly experienced engineers, we have the ability to provide you with specialised installations, practical termination and innovative products such as Patch-See easy-trace cabinet cables for rapid reconfiguration.

Multi User AV Installations

Projectors to electronic white boards, audio solutions to LCD screens, we have achieved installations in the most unlikely of situations. In our choice of suppliers, we always concentrate on ease of use, reliability and the equipment being sympathetic to the installation environment and budget.

Roaming Data Access

Whether using equipment supplied by you, or their own, users demand the same level of service as if they were at a fixed workstation on a LAN. Using a range of technologies including VPN, remote desktops, Intranet, Extranet and desktop remote control, we will work with you to create a consistent level of service for your users, wherever they may be.
